PB4Y-2 OF VP3 119 SHOT DOWN NEAR AMOY 22 MARCH;

PASSAGER DON BELL, WAR CORRESPONDENT, TELLS STORY.

The second issue of "Air Notes From China," prepared by U.S. Naval Unit Headquarters, Fourteenth Air Force, and dated May, 1945, is devoted exclusively to "Survival" in the China Theatre. In it are the "Walk Out" stories of U.S. Naval Air Crews which returned from Jap-occupied sections of French Indo-China and the China Coast.

One of these stories tells of the crash of a PB4Y-2 of Patrol Bombing Squadron One Hundred Nineteen, after a sustaining direct ack-ack hit. Operating out of Clark Field, the Privateer was commanded by Lt.(jg) Virgil J. Evans, USNR, and carried as a passenger, War Correspondent, Don Bell. Seven men were rescued. They were: Lieutenant Evans; Mr. Bell; Ensign Kirby J. Lindsley, Jr., USNR; Co-pilot; John R. Pearce Jr., AM1c, USNR; James A Warr, ARM1c (T), USNR, Maurice L. Walker ARM3c, USNR, and Ernest F. Rois Sle, USNR.

The following members of the crew are missing: Ensign Francis W. Groene, USNR, Navigator; Robert J. Johnson, AM2c, USNR; Andrew J. Wilson, AM1c, USNR; Nicholas Léo Jr., AM1c, USNR; James L. Doss, AM2c, USN; and Calvin C. Gipson, Sle, USNR.

Here is a complete reprint of the account of "Air Notes From China":

EVASION FROM AMOY AREA

On 22 March 1945, a PB4Y-2 "Privateer" crashed in Amoy Harbor on the China Coast. The plane, from Fleet Air Wing 17, was flying its regular patrol from Luzon and had just flown over Amoy Harbor at 500 feet in quest of shipping targets when it sustained a direct A/A hit in the fuselage and was sent crashing down into the water below. A passenger in this plane was Mr. Don Bell, War Correspondent for Mutual Broadcasting System. His story of the crash and subsequent rescue and walk out is given below and affords a good example of typical walk outs in the China coastal area.

It might be noted that this plane crashed in one of the worst spots on the entire coast, not over a mile from the island of Amoy, the most heavily fortified Japanese stronghold between Shanghai and Hong Kong. The entire mainland surrounding Amoy Harbor is unoccupied and is inhabited by friendly Chinese who have been briefed by American service personnel on the handling of downed American pilots. Also, there are U.S. Navy and AGIS-China stations nearby. However, the three islands in Amoy Harbor, Amoy, Quémoy, and Kulangsoo, are the Jap fortresses and are definitely unsafe. Similarly, the harbor is considered unsafe, and ditching there is certainly not advisable. A crash landing on the is practicable and is entirely safe.

A word from Mr. Don Bell is in order before we hear his story of this experience: Before 8 December 1941, Mr. Bell was a radio commentator in Manila, P.I., and was well known, both by Americans and
and Japanese, for his predictions of Japanese intentions in the Far East. He was captured by the Japanese when they took Manila on 8 December and was immediately interned with his wife and two young sons in Santo Tomas Prison in Manila. There they existed until 3 February 1945—three long years—when they were liberated by the spectacular action of the Second Battalion of the United States First Cavalry. After over three years internment, subject to Japanese indignities and atrocities, and endurance of the "slow starvation" diet which the Japanese designed for these prisoners, when Bell was liberated from prison he sent his wife and two sons home and immediately set out to learn about modern warfare. Feeling he "had a lot to catch up on in a short time", he requested assignment to the most dangerous missions possible. And so it happened that he happened to be aboard Lieutenant Jim Evans' "Privateer" on that fatal day.

AND NOW MR. BELL'S OWN STORY:

So, we dropped in unexpectedly for a visit in China.

When I say "unexpectedly", I mean we had about three seconds' warning and no chance to change our minds. And when I say "dropped", I mean just that; we dropped from about 500 feet at the rate of about 160 knots—and without benefit of a parachute, or time for a prayer.

After the excitement was all over and we were in friendly hands, I remember thinking, "This is a hell of a place for a War Correspondent to be."

My part in this story began down in Manila when Lieutenant Dick Lundgren, Navy FPO Officer, casually mentioned that the patrol flights out of Luzon might make a good eye-witness story for the folks back home to listen to, if any War Correspondent felt like taking a fourteen hour trip along the China coast in a Privateer. It sounded exciting. Now that I look back on it; it was.

It took about five minutes to get my "orders". A twenty minute jeep ride, a thirty-five minute hop in a Piper Cub, and I was presenting my orders to Captain Jones, C.O. of the Seventeenth Naval Air Wing.

"Want something hot?"

"The hotter the better the story, Captain."

So, early next morning I listened in on a briefing, met Lieutenant (jg) Jim Evans and his crew, all of whom started telling me and showing me why the PB4Y-2 was the finest plane that ever did a patrol job; seven feet longer than the old PB4Y, faster, more fire power, the plane that Tokyo Rose called "The Four-Engined Fighter"—and so on until time to check out.

My first impression of the interior of the plane was that it would be easier on War Correspondents if the gun turret were a little higher or a little smaller, or not so much in the middle of things. Later the plane captain, John Fears, ARM1c, asked if I'd like to climb into that same turret and have a look around; gunner Maurice Walker, ARM3c,
helped me climb in, and I began feeling a little more friendly toward that turret. But it must have resonated having a rookie fooling around with it, because a couple of hours later I'm sure it kicked me in the back and knocked me out—but that's all hearsay.

It happened right after we came out of Amoy. I remember pilot Evans telling Co-pilot Kirby Lindsley how funny it was that we hadn't drawn any fire from the island, and I walked out of the cockpit thinking all the fun was over for a few minutes, started to sit down on the little bow which houses the First Aid emergency gear and which also acted as my Seat Of Honor during the ride. Just then the Navigating Officer, (Insign Frank Greene—he went down with the ship) smiled over in my direction, indicated by sign language that they were beginning to pop at us. The radioman (James Warr) began to double up his fist—I suppose he was going to shake it at the Japs, but that gesture was never finished. Suddenly the lights went out for me.

I found out afterwards that the pilot had started evasive maneuvering, was at the top of a 500 foot loop frog and going down, when we were hit. It probably knocked the tail off our plane, but we kept right on gliding down at the rate of 160 knots. At about two hundred feet, the pilot discovered he had lost his elevator control and couldn't pull out. He didn't have time to straighten out the wings—and then we hit.

The bounce probably broke broke the plane in two at the waist (because we never saw that part of the plane again) but the bounce must have saved some of our lives. The next time we hit; the nose dug right in and stayed down. What was left of our FB4Y-2 burst into flames immediately.

All this was told to me by the other survivors, of course. I knew nothing about it at all. That gun turret—at least I think it must have been that gun turret, because nothing else could've smoked me quite so hard on the tailbones—took its revenge and I was "out" for some little time. How I ever got to the surface through a burning plane I'll never know. My first conscious moment was when I heard the pilot say, "Now, just relax."

Co-pilot Lindsley told me later that I bounced up a few feet from the burning fuselage and Lieutenant (jg) Evans yelled at me to get away from the plane (we were still carrying plenty of bombs). But it hadn't registered—I was still bouncing there a few feet away from the plane. Th on Jim Evans swam over, grabbed me by the coveralls, or by what was left of my flight coveralls, dragged me away from the plane, told me to relax.

And then things began registering on my very clouded brain. I was still helpless, however; my life belt wouldn't inflate (wouldn't have made any difference anyway because there was a big hole in it), and I wouldn't have been content to just settle down and forget the cares of the world. I remember Evans yelling at Lindsley to come over and take care of me for a few minutes; so I dutifully put my arm over the Co-pilot's shoulder while the pilot swam away—went back toward that burning plane, looking for a liferaft.
Miracles still happen. He found one under a lot of debris, dragged it out inflated it. They got me into it somehow—and then they went looking for survivors. Thirteen of us had started out on that patrol job. Six of them I never saw again. In a drop like that it seems impossible that any of us could've survived. But, finally, there were seven of us in that one inflated, little life raft: with one jungle pack, and two and a half paddles. So we got ourselves organized as well as the circumstances permitted, and started paddling.

Where to paddle was a problem—which the Japs soon answered for us.

During all this rescue work, we were hidden from the Japs by what was left of our burning plane. But once we paddled out from behind the plane and got into view of the Jap gun positions, they began firing at us. That told us which way to go. A few minutes before we had noticed a couple of boats paddling out our way from the opposite shore. As soon as the Japs began firing those boats beat it right back to shore—and that told us the whole story. Those were friendly Chinese trying to come out and rescue us; but they never could have made it in the face of that Japanese shelling. So, they went back to shore, waited, hoping that we could make it to them.

That was the toughest job seven men ever had. How we paddled for that shore. The two men who seemed in the best condition took the two whole paddles; a third man used the half paddle, and the rest of us used our hands. We went around in circles for a while, finally got the raft straightened out, and put every ounce of energy into getting to that shore in the fastest possible time. We simply couldn't have moved faster. Then we saw three motorblats coming out toward us from the Jap side of the shoreline—and we moved faster, anyway.

By the time we got to the friendly shore, we were really "pooped". Chinese fishermen were yelling at us to hurry, waded out into the water to help us, grabbed us by the arms and almost dragged us ashore. But we found we were not there at all. We were simply on a mud shoal that had been formed by the low tide. The Chinese had carried their boats across that shoal to open water, about half a mile away, and we had to make it to those boats.

If somebody tells you that it's impossible to run through mud that's knee deep, tell them they don't know what they're talking about. Because we did it. Those ap motorboats were getting too close for comfort. We'd run a few steps, fall down exhausted; the Chinese would help us to our feet and we'd run a few steps more, fall face downward in the mud—the fishermen would pick us up again.

God know how we ever got to those boats, but we don't. The fishermen didn't have to tell us to hide in the bottom of these Sampans; we simply fell in, exhausted. The fishermen got us loaded in, two to a boat, piled fishing baskets over us to hide us, and then started paddling and punting like no one ever paddled or punked before.
Then a couple of Jap planes came looking for us. So the fishermen paddled their sampans into some caves, waited until the Adams had passed over; then one by one the sampans took off across that lonely exposed stretch of water. We had to make the shore, Japs or no Japs. So we crouched under clamp baskets while our Chinese friends outside any Harvard crew getting across that open bay.

Lindsay and I were together in one sampan. So we hit the shore together; and not a soul was in sight except ourselves, and we wore a sight! My cowlings were just hanging on me by the grace of one shoulder and a zipper. Ensign Lindsay had gotten into some oil somewhere along the line and looked like a night fighter—even the fishermen took time out to laugh at us. Then they hustled us along and into a little Chinese fishing village, which probably appears on no map of China, but bears the name of Chum Foo Sik (at least that was as close as our Chinese friend could come to putting it into English for us). We went through the village to a stone house, were asked to step in. There we met the rest of our party. They had arrived first and were waiting for us.

Up to this time not a word or a gesture had passed between any of us and the Chinese fishermen who had rescued us. There was no talking. They knew we were Americans. They knew we were friends and allies. They risked their lives in saving us. No questions asked, no rewards wanted. But, after they knew we were safe, after tea and cakes had been served, then the whole village crowded into that little room to stare at us. Eyes of the witnesses began to gleam with excitement and with plenty of gestures, their version of how we had been shot down by Jap ack-ack, how funny we had looked trying to run across that mud flat, how we had been smothered under several layers of fishing baskets. Then the story tellers began to tie together the details; it must have been about the noisiest rescue party that ever happened.

Then suddenly all the noise and talking stopped, as if by magic. We couldn't hear it, but they did. Those Jap Adams were overhead again. Somewhere, a couple of bombs were dropped, but not in our vicinity. The Adams flew away finally, and we all breathed easier again.

Then Mr. Huang appeared on the scene. He spoke enough English so that he could tell us all about it. But he never did tell us who he was. He was just a Chinese businessman. He just happened to be visiting in the village. It was very fortunate that he was there, because he knew exactly where to go and what to do. Imagine our surprise when he told us that there was a United States Naval Station just 80 miles away. It would be tough going, considering our conditions, but he would take us there within less than two days. That was the happiest news we ever heard. Here was a man telling us that we were within a few hours of safety.
Huang told us we had better be moving out of that village, however. The Japs might have spotted us and they might start bombing the village. So we'd better get ourselves ready for some forced marching.

The first hour was easy, but worrying. We climbed into small junks and sailed within a mile of that Jap-held coastline, got out about an hour later, walked about four miles, were received as heroes by the town army, boded down for the night after a swell Chinese banquet. From somewhere a Chinese doctor appeared, dressed the wounds of radion man Warr, who had a bad shoulder wound. We resolved then and there that if anyone ever said anything derogatory about a Chinaman within our hearing, there'd be one helluva fight then and there.

Our own parents couldn't have taken better care of us, then did those Chinese people who met us, fed us, clothed us, stayed up all night so that we could have their beds. They couldn't do enough for us, and we were humble with gratitude.

An interesting note at this juncture was when the village chief produced from out of nowhere a "Pointoo-Talkie". With this little miracle to improve Sino-American conversation and mutual understanding, we succeeded very well in exchanging thoughts and planning our departure. (We later learned, upon reaching Kunming, that these "Pointoo-Talkies" had been distributed several months before by a U.S. Navy Lieutenant who had traveled through this area in the interest of arranging the evasion and escape of downed Allied pilots.)

Huang was better than his promise. He told us that we would be with the Navy within forty-eight hours. Actually, we met the Navy within twenty-four hours. Bosn's Mate Tucker was out looking for us. ASIS men were doing the same thing, combing roads and rivers—we got away from the Japs alright, but we couldn't have gotten away from those Americans who were out looking for us, if we had tried.

When we saw Tucker swinging along with a Tommy-guns over one shoulder and a bag of Irish rations over the other—well, you can talk about a sailor's welcome, but you haven't seen anything.

That night we slept in American sacks, ate American food, smoked American cigarettes, listened to American servicemen swapping their experiences for ours; boy, it was Heaven.

We did a lot of walking and bitching, jeep and plane riding after that before we got back to Kunming where we could really rest, and draw a complete outfit of new GI clothes. But, now that it's all over, I think we ought to get something on the records for the benefit of the rest of you who may be dropping in on China unexpectedly. The first and most important thing we want to say is this: trust the Chinese. He's your friend and he'll take care of you. He's your ally in this war, and you never had a more loyal one. He'll hide you, feed you, clothe you, care for you, get you back to your own people. You may have a hard time understanding him at first, but keep your sense of humor and use the sign language and overlook his queer-looking and little ways. Remember that you're a pretty queer looking duck to him, too.
And as a War Correspondent, who has no business at all going through an experience which can't be talked about or written about except in secret journals, I want to express my personal admiration for lots of things. For the way the survivors of Lt. (jg) Evans' crew handle all themselves in a time of real danger! The way the Navy has organized its share of China coast rescue service that makes it 99 chances out of 100 that, if you drop in on China unexpectedly, that you'll be taken care of, brought back to civilization!—why, they make a drop that looks like "curtains" turn out to be the finest vacation you ever had.

Personally, I owe plenty to the Navy. Jim Evans saved my life (and I hope he gets the proper citation for what may have been just a job to him, but meant considerably more to me than that). Those men at Lunga made me appreciate the fact that my life was worth saving, too, at least. And, all along the line, all the way up to Lunga, the Navy and its men have done a job that no other outfit in the world could've done.

Yes, I owe a lot—including my life—to the Navy. And if there's anyway I can repay it—well the Japs have missed me twice and I guess I'll be around for awhile longer, waiting to repay favors.

And may we, the reporting officers from China, add a note here. In interrogation of the crew of this PB4Y-2, in talking over the details of the crash, of "coming to" in the water, and of getting safely into Chinese hands, one fact is common in all the stories. Co-pilot, crew members and passenger Bell join in saying; in the words of one of them, "I'd like to say, Lieutenant, that our pilot, Jim Evans, was "4-o" during the whole damned thing. He "took over" from the moment we hit the water until we met the Navy and he really took care of the lot of us. I guess you'd call his actions that day "heroic"; whatever they were, it's darn sure that we all owe our lives pretty much to his quick-thinking and cool-headedness.

Lieutenant (jg) James Evans showed himself to be all man that day in March 1945, and his conduct was truly a credit to the United States Naval Service.
